

Your Lateral Transfer and Repositioning Partner

Safe patient handling made simple.

80%-90% Force Reduction

BRIDGEAIR™ Transfer System

An innovative air-assisted and breathable lateral transfer and repositioning mattress.

- Designed to prioritize the well-being of caregivers, patients, and healthcare organizations
- Revolutionizes patient transfer by significantly reducing the physical effort required to move patients
- Advanced microclimate testing for optimal comfort and positive clinical outcomes
- Value-driven purchasing programs that set it apart as the premier choice

BridgeAIR™ Mattresses are Available with Optional Bed Connecting Straps, Single Patient Use Mattresses, and Reusable Mattresses

SLIDE MATE™ Premium Slide Tubes

A Slide Tube designed to help you transfer and reposition patients safely in a variety of healthcare settings.

- Significantly minimizes the effort required by caregivers to move patients
- Simple to use and cost-effective to prevent staff injuries
- Single patient use quality that will last the patient's entire length of stay
- Contact us for a free sample!

Dispensing System Drives Compliance

SlideMate™ Slide Tubes are Available in Single Patient Use and Reusable Sizes

Antimicrobial for Infection Prevention

McAuley Gold Rollboards

A lightweight, patient transfer device that aids in the transfer of patients between a variety of surfaces.

- Seven models to choose from, designed specifically for every department
- Significantly reduces the risk of injury by minimizing caregiver effort associated with a lateral transfer move
- An antimicrobial cover and inner core make disinfecting the Gold Rollboard between patients simple and safe

BRIDGE STAR Safe Turning and Repositioning System

A single patient use safe turning and repositioning system used by caregivers to safely manage a variety of frequent and strenuous patient handling tasks.

- Available in a variety of sizes and options in both air and sheet systems
- Prevents injuries by significantly reducing the effort and force required to perform turning and repositioning tasks
- Incorporates breathable materials allowing the system to be left underneath the patient for high staff compliance when following turning and repositioning protocols

4060 One-Way Slide Cushion Repositioning Aid

A low-friction breathable cushion designed to safely position patients/ residents in chairs, wheelchairs, beds, or cars reducing the risks of slips and falls.

- Only slides to the back of the chair, not forward preventing the patient/resident from egressing forward out of the chair
- Simplifies caregiver assistance, eliminating the need for lifting, while patients can easily adjust it independently
- Can be used in a car, chair, bed, or underneath any pressure relief cushion or incontinent pad

Prevents Fall-Related Injury

B-SAFE Safe Patient Handling Program

This customized education and training support program includes assessments, competency documents, safe patient handling resource materials, and guided consultation to prevent staff injuries during patient transfers. The B-Safe program is a value-added service for all of our Bridge customers. For more information, please contact us at info@pelstarllc.com.
