

Your Trusted Partner in Safe Patient Handling & Pressure Injury Prevention

*You take care of the patient,
we take care of you.*

BRIDGEAIR™

Breathable lateral air transfer systems

- Designed to prioritize the well-being of caregivers, patients, and healthcare organizations
- Revolutionizes patient transfer by significantly reducing the physical effort required to move patients
- Advanced microclimate testing for optimal comfort and positive clinical outcomes
- Value-driven purchasing programs that set it apart as the premier choice

BridgeAIR™ mattresses are available in Single Patient Use Mattresses, Reusable Mattresses, and with Optional Bed Connecting Straps

SLIDE MATE®

Slide sheet alternative to air transfer systems

- Significantly minimizes the effort required by caregivers to move patients
- Easy to use and budget-friendly to prevent staff injuries
- Single patient use quality that will last the patient's entire length of stay
- Contact us for a free sample!

SlideMates® are available in Single Patient Use and Reusable Sizes

GOLDROLLBOARD™

Lightweight, soft foam core patient transfer board

- 75% lighter than metal boards, making transfers easier and reducing staff fatigue
- Heat-sealed seams & antimicrobial materials help prevent contamination and keep surfaces hygienic
- Smooth, roller-free surface ensures gentle transfers without bruising or imaging interference
- Seven models to choose from, designed specifically for every department

BRIDGE STAR

Single patient use safe turning, transfer, and repositioning system

- Available in a variety of sizes and options in both air and sheet systems, including convenient kits to reduce setup time, and help staff deliver more efficient care
- Prevents injuries by significantly reducing the effort and force required to perform turning and repositioning tasks
- Incorporates breathable materials allowing the system to be left underneath the patient for high staff compliance when following turning and repositioning protocols

One-Way Slide Cushion

Breathable, low-friction cushion that safely positions patients in chairs, wheelchairs, beds, or cars, reducing slip and fall risks

- Only slides to the back of the chair, not forward, preventing the patient/resident from egressing forward out of the chair
- Simplifies caregiver assistance, eliminating the need for lifting, while patients can easily adjust it independently

FLOJAC

Air-Assisted Patient Fall Recovery Device

- Minimize staff and patient injuries related to lifting a fallen patient from the floor
- Flojac has five individual chambers, including two pressure indicators to control inflation and deflation, making it easy for caregivers to transfer patients to surfaces of varying heights
- Easy to clean wipeable handles and safety strap, with no removable parts, promoting quick and simple cleaning

B-SAFE Solutions: Tailored for Your Needs

B-Safe Solutions offers a tailored approach to guide you in making the right decisions. Our solutions are fully supported by the clinical expertise required to help you achieve the outcomes you desire.

- **B-SAFE with ACE:** Stop overspending with solutions that optimize your budget
- **B-SAFE by Department:** Targeted solutions for delivering injury-free care across specific areas of your facility
- **B-SAFE Clinical Support:** Reliable clinical support, always there when you need it
