

B-SAFE Clinical Support

Every facility is different.
Your safe patient handling and injury prevention program should be too.

Too many injury prevention and wound care repositioning programs struggle to last because they're built as one-size-fits-all solutions. Your team, your patients, and your goals are unique, and your program should reflect that.

That's why we created **B-SAFE Clinical Support**, a value-added service included for all Bridge Healthcare customers.

Our clinical experts work alongside your team to develop a safe patient handling, injury prevention, and pressure management program that aligns with your goals and supports positive clinical outcomes. It starts with listening and is built through collaboration, tailored specifically to the needs of your healthcare facility.

The result is a program that is sustainable, measurable, and designed for **your** facility.

B-SAFE Clinical Support Includes:

- In-Person and Virtual Support
- Initial and On-Going Education
- Quarterly Outcome Improvement Visits
- On-Site Assessments, Consultations, and Evaluations
- Compliance Correction Guidance
- Competency Guides
- Culture Improvement Process
- Product Selection, Budget Review, & Conversion Planning
