Every Transfer Counts.

Safe Patient Handling solutions for Ambulatory Surgery Centers, from Bridge Healthcare by Pelstar.

Most U.S. outpatient surgeries now take place in ASCs. Each case means at least two patient transfers, and most are still done by hand. That puts post-op patients at risk and wears down staff.

Bridge Healthcare makes every transfer safer and easier:

Lateral Air Transfer Systems

Safely move patients with minimal effort, reducing the risk of staff injuries

Repositioning Systems

Prevent pressure injuries through powered and manual systems

Slide Sheets

A simple alternative option to air transfer solutions

Rollboards

Advanced technology for safer, more comfortable transfer boards

FloJac

Air-assisted patient fall recovery device

The Results:

- Fewer Staff Injuries
- Safer Patients
- Better OR Throughput

Facilities with safe patient handling programs have seen up to **43%** fewer staff injuries.

Why ASCs Choose Bridge:

- **Built for non-ambulatory patients:** air and slide technology eliminates manual lifting.
- **Bariatric-ready:** including FloJac fall recovery up to 1100 lb.
- **Infection control:** single-patient-use options.
- **Training included:** free in-service for your staff.
- **Easy to buy:** Available through your distributor.

Ask about a **free safe patient handling assessment and product trial** to see which solution is a match for your facility.
